Are you looking for a summer research experience that is both professionally and personally rewarding?

The Department of Chemical and Biological Engineering at the University of Colorado will be conducting a ten-week summer research program for undergraduates in chemical engineering, chemistry, biochemistry, environmental engineering, bioengineering, materials science, and related fields.

Undergraduates will be selected for this program via a competitive process based on their academic record, letters of recommendation, personal statements, and accomplishments. This program is restricted to U.S. citizens or permanent residents.

Interested students should submit a completed application form along with the requested supporting materials. Additional information and applications are available at:

http://www.colorado.edu/che/reu/

Application packets must be postmarked by March 1, 2009.
