CHE Program Educational Objectives

The undergraduate program in chemical engineering builds a strong foundation for the professional development of its students and prepares them to meet the technological challenges of the future. With a bachelor’s degree, the graduates are well equipped for a wide variety of positions as practicing chemical engineers or for graduate studies in competitive engineering and scientific disciplines. The intensive program promotes continued learning and professional development by providing the proper knowledge and stimulation in an ideal setting for personal growth. The program emphasizes its historic, nationally recognized strength in chemical process design, yet draws on the scholarly accomplishments of its faculty to integrate traditional chemical engineering topics with specialized studies in the contemporary fields of materials, bioprocessing, environmental engineering, biomedical engineering, and food engineering.

The faculty of the Chemical Engineering Program is committed to sharing the responsibility of learning with the students, providing a rigorous academic environment that encourages active learning, high quality student performance, and ethical and professional conduct. Through the integration of the knowledge and skills acquired in a demanding set of courses, extracurricular experiences, and faculty expertise and scholarship, the Chemical Engineering Program has established the following objectives.

The Chemical Engineering Program will prepare its graduates

- to be successful in the practice of chemical engineering or in advanced studies in engineering, scientific or complementary disciplines;
- to assume leadership roles in industry and/or their communities;
- to contribute to the economic environment of their communities; and
- to maintain career skills through life-long learning.
