How the Interactions of Machine Learning and Speech have Affected People

ALFRED P. SLOAN
FOUNDATION

Thursday, March 30th
4PM – 6:30PM
Location: TBD

Dr. Donald S. Williamson

Abstract: Machine learning has helped make many applications, including speech recognition, speech translation and natural language processing become more prevalent. In this talk, I will discuss some of the recent advances involving speech and machine learning. This will include a discussion about their impact on people and some of the interesting, yet open problems. Additionally, I will share about possible research experiences in industry and academia.

Donald S. Williamson is an Associate Professor in the Department of Computer Science and Engineering at The Ohio State University, where he is also an affiliate member of the Translational Data Analytics Institute (TDAI) and the Center for Cognitive and Brain Sciences.
